

# All about Treated Pine Timber For Sale at Renovator Auctions

All experienced builders and home handypeople know that our treated pine timber for sale can be highly recommended for many, many excellent reasons. However, anyone new to using timber, and planning on using the treated pine timber for sale should be aware that there are a couple of drawbacks to using this versatile wood.

## What Is Treated Pine?

Radiata Pine (the most common type of pine used in Australia) is a soft wood that has grown quickly so it has large cellular structure, and is therefore light, and easy to handle. So, treated pine is popular with both inexperienced and experienced builders. To combat the short life expectancy of untreated pine, it is treated with preservative chemicals.

According to [Wespine](#) one of Australia's largest treating plants; the treated pine most commonly available in Australia is either preserved with CCA or ACQ.

## Positives for Using the Treated Pine Timber For Sale At Renovator Auctions

- the main benefit for using treated pine is it's a softwood that is light and relatively easy to handle
- once it has been treated, the life expectancy of pine is commonly equal, if not better than most hardwoods
- pine is grown in many plantations all around Australia; this can be seen as a positive because it is fast growing so quick to replace, and is a relatively cheap timber to buy

## Things That Need To Remembered When Using The Treated Pine Timber For Sale

- many view the proliferation of pine plantations as a negative because they displace all the indigenous old growth forests
- treated pine should only be used in compliance with Environmental and Health&Safety Standards. The [NSW EPA website](#) has a number of Fact Sheets that should be read before you consider purchasing any of our Treated Pine Timber For Sale.
- although the grain in pine timber is quite attractive, the knots can make treated pine a little trickier to work with.

### **Common Uses for the Treated Pine Timber For Sale At Renovator Auctions**

**Because of the low cost, long life expectancy, relative ease of handling and strength of treated pine, it has a whole range of projects it is commonly used for, such as,**

- house and deck framing,
- retaining walls,
- poles,
- stumps,
- fences.

### **When all things are Considered.**

**Treated pine is a popular, light weight, strong timber that is easy to work with. However, it should be remembered that there are some concerns that need to be considered before you decide to use treated pine timber.**
